

# Java @ Hosting ?

**Jean-Baptiste BUGEAUD**

Independent IT Architect & Consultant

# Agenda

- Situation
- Platform Strengths
- Needs
- Coming on V2
- Improvements ?
- More ?

# Situation

- Little low cost or free Java hosting
- A Famous Exception <http://www.myjavaserver.com/>
- Historical list  
<http://www.servlets.com/isps/>

# Platform Strengths

- Java SE is mature & secured
- Java EE is powerful & agile
- Multiple Implementations
- OpenSource world

# Needs

- Clustering
- Virtual hosting
- Resource sharing & quotas (memory, CPU)
- Shared application (same EAR/WAR reused on multiple "domains")

# Coming on V2

- Virtual hosting
- Port virtual hosting
- Alternative docroot
- Realm on virtual host (LDAP, JDBC, ...)
- Standard based access log (apache)

# Improvements ?

- Automatic update
- Integrated URL rewriting
- Restart button working ;-)
- EJB / WS based Realm
- Specify multiple resource configuration for application sharing across virtualhost
- Gardian Application to enforce QoS
- Management Application for customers
